

Tanishk Kumar

Full-Stack Engineer | Delhi, India

rajputt4ni5hk@gmail.com | LinkedIn | Portfolio | GitHub

Summary

Full-Stack Developer building production-grade apps with **TypeScript**, **Next.js**, **Node.js**, and **PostgreSQL**. Delivered **4+ projects** handling **3000+ API requests**, with real-time architecture and optimized backends. Key achievements include **90–99%** latency reduction in forensic workflows and **60%** codebase simplification via monorepo. Actively strengthening **DSA** and **System Design**.

Technical Skills

Languages: TypeScript, JavaScript, C++, C, Python

Frontend: React.js, Next.js, Tailwind CSS, Responsive UI, Component-Based Architecture

Backend: Node.js, Express.js, WebSockets, REST APIs, JWT, Authentication, Redis, Rate Limiting

Databases: PostgreSQL, MongoDB, Prisma ORM, Indexing, Query Optimization

CS Fundamentals: Data Structures & Algorithms, System Design Basics

Dev Tools: Git, GitHub, Vercel, Turborepo, Monorepo Architecture, Docker, Render

Concepts: Real-time Systems, LLM APIs, Streaming Architectures, Scalable Backend Design, Caching Strategies

Projects

ForenSweep — Secure Forensic Workflow Platform

GitHub

Node.js, TypeScript, Python, Next.js, Prisma, Docker

- Engineered a secure forensic platform for file sanitization, evidence preservation, and recovery validation using a worker-based pipeline, supporting up to **100 candidate recoveries per scan window**
- Achieved file-level sanitization in **40–90 ms** for **1–20 MB** files and archive-based recovery of a **26 MB** job in **0.32 s**, optimized for batch forensic workloads
- Delivered sub-second interactive performance with **287 ms** average page load time, **309 ms** average FCP, and **0.00 CLS** across repeated local runs
- Enabled audit-compliant sanitization via pre-erase artifact preservation and job-based certificate generation for **100%** of erase operations

Relay Rooms — Real-Time Conversation Platform

GitHub

React, Socket.IO, JavaScript, CSS, Vite

- Developed a minimal real-time conversation platform for private, room-based communication using Socket.IO and a lightweight frontend
- Achieved **186 ms** page load time, **264 ms** FCP, **0.00 CLS**, and **6.6 ms** TTFB for sub-10 ms initial server response
- Delivered WebSocket-driven instant messaging with **0** initial HTTP API calls and a **300 B** CSS footprint

Readable.ai — AI Reading Assistant

GitHub

TypeScript, Next.js, PostgreSQL, GROQ API, Turborepo, Monorepo

- Implemented an AI reading assistant processing **3000+ API requests** with LLM-powered response streaming on a Next.js/PostgreSQL stack in a Turborepo monorepo for shared configs and packages
- Achieved a **324ms median page load** and **181ms average TTFB** across headless-browser benchmarking (Playwright), with a **150KB average JS bundle**

World Monitor — Real-Time Global Data Dashboard

GitHub

TypeScript, Next.js, REST APIs, PostgreSQL, Caching

- Architected a real-time dashboard consuming live REST APIs to monitor global markets and news, achieving an **11ms median page load** and **28KB** page footprint across local benchmarking
- Served market and news data via cached REST endpoints (**/api/markets**, **/api/news**) with **17ms** and **51ms** median response times respectively

Education

B.Tech in Electronics & Communication Engineering

2024 – 2028

Guru Gobind Singh Indraprastha University, Delhi

Certifications

- Node.js – Beginner to Advance Course with Projects** (Udemy) — Instructors: Hitesh Choudhary, Piyush Garg
36.5 hours — [ude. my/UC-99c309a3-2938-461b-bc30-63a277e2ea74](https://www.udemy.com/course/nodejs-beginner-to-advance-course-with-projects/) Sept 2025
- Web Development Cohort (100xDevs Cohort 3)** — Instructor: Harkirat Singh Mar 2025
Full-stack web development certification covering modern web technologies and application architecture
